

EXPLORING AND USING NATURAL BEACH RESOURCES

(part of Castle School's End of Year Creative)

Traditional lessons were abandoned at the end of term at Castle School when the whole school were invited to discover new skills or indulge in some of their favourite interests during a two day creative where pupils opted for different workshops run by staff who shared hobbies or activities they enjoy when not teaching their usual subject.

The second day of activities saw a large group of students set out for the beach at Saundersfoot where they learnt about cockling, picked up litter, created art out of natural beach resources with a competition for the most artistic sand castle and participated in a treasure hunt to discover more about the local habitat.

The day was rounded off with a game of volleyball. Pupils had to work together, communicate, use their imagination and indulge their creative abilities. There was a lot of beautiful art work, including the solar system made out of sand, shells and pebbles and a beautiful mermaid.

Quotes from the day included

Rob : 'My favourite part of the day was beach cleaning because we're helping the world.'

Carys : ' My favourite part of today has been the volleyball. The things I have learnt include how to cook mussels. Also, if cockles don't open they are not meant to be eaten and that winkles is a thing!'

Tristan : 'My favourite part of the day was finding out what you can pick at the beach and cok and how easy it is. I have learnt a lot today. Also how to make sculptures out of things we found on the beach and how clean Saundersfoot beach is compared to other beaches.'
